Projects

BobHome

Developed a responsive website with **JavaScript, HTML and CSS**. This consumer-focused blog gives clients a great pulse on what's hot in housing and rental markets, how to build home equity, and what they should know about new legislation affecting homeowners.

Project Highlights:

- Made website load faster by lazy loading images using native lazy loading feature.
- Developed a responsive menu section which makes the UI functional for mobile users.
- Added creative and subtle animations which looks pleasing and increases the engagement.

ESHOP

Built an e-commerce website using **JavaScript, HTML and CSS**. This e-commerce catalogue gives consumers a great exposure on clothes market. It allows to view products in many categories.

Project Highlights:

- Developed a hero slider to capture engagement from the visitor.
- Used API to get the all the products and dynamically show featured and best seller products.
- Made the website responsive using CSS media queries, flexbox, and grid.
